Customer Churn Analysis

- . 20.38% of customers have churned, indicating a significant retention issue.
- . Low-balance and mid-tier customers churn more, while high-balance customers churn the least.
- . Churn is extremely high (56.2%) among middle-aged customers (51–60 years old)
- . Germany has the highest churn rate, followed by Spain and France.
- . Tenure, salary, points earned, complaints, and credit score have minimal impact on churn rate.
- . Customers with 3+ products exhibit the highest churn rates, but their sample size is small.
- . Complaints strongly correlate with churn (almost 100%).
